Silver ionizer for enrichment with silver ions and the decontamination of large volumes of water

Ponor pro

Silver ions - a source of health and life

Purpose:

Electronic device (apparatus) for silver ionization water "Ponor PRO" is a new generation of professional equipment designed for the enrichment (dressing) of water (spring, tap, etc.) silver ions (Ag), thereby producing Silver water (colloidal silver). Was designed specifically for high volume tanks (10 to 1000 liters), and wells and boreholes for drinking water daily consumption of 10 to 1000 liters. In use water is saturated with silver ions, while both purified from harmful microorganisms. Saving and drinking qualities for a long time, and acquires properties of a natural antibiotic. The effect of silver ions is on more than 650 types of bacteria (for comparison: the effect of any antibiotic is on no more than 5 to 10 types of bacteria). It is known that the antimicrobial effect of silver is higher than that of penicillin. At the same time the silver ions friendly bacteria cells, such as absent adverse effects on the body - something characteristic of

antibiotics. The healing properties of colloidal silver have been known since ancient times. The concentration of silver ions has guaranteed optimum values for drinking water. Apparatus is characterized by comfort, long life, stable parameters and automated operation combined with light control and functionality of the electrode. There are 3 programs work by the amount of water that can optionally be reprogrammed for different volumes (up to 1000 liters) on request. It has a silver electrode with increased weight made of silver with high quality (sample 0.999), with its cable length can reach 20 meters. Used is modern technology and precision microelectronics. Apparatus is designed and manufactured entirely in the European Union. Available detailed instructions in English. There is a warranty and post warranty maintenance. For more information:

Technical characteristics:

Power supply: 220V/50Hz AC +/- 10%
 Power consumption: <1W
 Amplitude of the output: 12V
 Output current: reversible with frequency 0.2 Hz
 Concentration of silver ions in accordance with the volumes: 0.02 to 0.05 mg/l
 Cable length: 5 m standard (option: up to 20m.)
 Electrode resource:> 30 000 l (electrode resource is approximate and only wear silver part, mechanical damage can occur much earlier);
 Volume of ionized water (standard):
 Program 1: from 10 to 50 liters
 Program 2: from 50 to 150 liters
 Program 3: from 150 to 300 liters
 (There are optional individual programs with other volumes with a maximum capacity of up to 1000 litres.)
 Electrode (anode and silver cathode) mass of silver: 10 g +/- 10%
 Mass Product Packaging: not more than 1.0 kg (up to 3.0 kg with optional extension cable).
 Warranty: 12 months

Features

Silver water in large quantities every day

Massive silver electrode with a long and robust cable

suitable indicators and buttons
